

ACM Fabrication

Aluminum Composite Material fabrication is Envision Plastics' newest service offering. With the expertise we have in NMR Technology and the equipment required to fabricate ACM, we are utilizing this material to make custom enclosures, panels, signage, and other parts that lend themselves to the benefits of this unique aluminum/polyethylene hybrid material.

Aluminum composite materials offer numerous fabrication advantages which can be of great value with select project applications.

- ◆ Material is stiff and flat
- ◆ Lightweight (50% that of aluminum)
- ◆ Several colors available including a brushed finish
- ◆ Can be rolled or formed in a press brake
- ◆ Surface is ideal for digital printing
- ◆ Used indoors and outdoors
- ◆ Can be CNC routed or punched
- ◆ Can be shipped flat and be formed by hand
